

Beginning Light Language (2014)

A short orientation

Geometry of reality

Light Language uses coloured light and sacred geometry to make clear messages. Clear intention organises what you notice and choose. Introductions often talk about resonance and layered subtle bodies — a way of describing the work, not medical advice.

A few working points

- Thoughts take part in experience.
- You are responsible for your choices.
- As above, so below: many teachers start with the subtler layers rather than forcing only the dense ones.

Sacred geometry

Colour and geometry are used as tools, not decoration.

Cube — holds focus; steadies a quality in place.

Sphere — opens; invites movement.

Pyramid — sharpens a goal; keeps a fact coherent.

Cylinder — connects two points; strengthens the flow between them.

Colour

- Red — vitality, physical movement.
- Yellow — clarity, focus.
- Green — balance, growth.
- Blue — rest, space.
- Purple — reflection, intuition.

How this is learned

A lot of it is handed down by someone who already lives it — not only read. Work with teachers and printed sources you trust.
